0 pts

Part 8: Comprehension Passage 1

Read the passage below carefully.

Jane was walking down a deserted American beach at sunset. As she walked along, she saw an old man in the distance. As she got nearer, she noticed that the old man kept leaning down, picking something up and hurling it out into the water. Time and again, he kept doing the same thing.

As Jane approached even closer, she noticed that the old man was picking up starfish that had been washed up on the beach and, one at a time, he was

throwing them back into the water. Jane was puzzled. She approached the old man and said, "Good evening, sir. I was wondering what you are doing."

"I'm throwing these starfish back into the ocean. You see, it's low tide right now and all of these starfish have been washed up onto the shore. If I don't throw them back into the sea, they'll die up here from lack of oxygen."

"I understand", Jane replied, but there must be thousands of starfish on this beach. You can't possibly get to all of them. There are simply too many. Don't you realise this is probably happening on hundreds of beaches all up and down this coast? Can't you see that you can't possibly make a difference?"

The old man smiled, bent down and picked up yet another starfish, and as he threw it back into the sea, he replied, "I can still make a difference one at a time!"

Answer the question below:

This question is designed for extended answers that parent/ teacher will have to assign and guide child to attempt after the test has been completed.

Grading: This question type is not graded on this system and will not affect the final score as it was designed in such a way that it requires manual assistance.

What did Jane notice the old man was doing when she was walking along the beach?

1 pt

Part 9 : Comprehension Passage 2

Read the passage below carefully.

Many people are confused about the world's largest snake. They are not sure if the python, boa constrictor, anaconda, cobra or viper is the largest. If you are talking about a heavy, long snake, then the anaconda is the biggest.

The boa constrictor grows up to 19 feet long. The anaconda, a member of the boa family, can grow to more than 30 feet long. That is as long as a bus! The python of Asia, about 30 feet long, weighs around 160 kilograms. A 30-foot long anaconda may weigh in at more than 250 kilograms! Anacondas are so heavy that they move slowly on land.

Those heavy snakes are better off living in the water, where they swim very well. The water helps support their heavy body. The colour of the anaconda varies from dark green to olive green to yellowish green with dark spots or rings on it.

Anacondas like to lie in muddy water with just their eyes and nose sticking out. Like all snakes, they flick their tongue out to sniff the air. Their sense of smell seems to be better than their eyesight. Pits by the side of their mouth sense the heat of their prey too. They use their jaws and teeth to grab any animal that comes to get a drink, then coil around it with lightning speed, constricting or squeezing so tightly that the prey cannot breathe. Often, they just drown their prey since anacondas can hold their breath underwater for more than ten minutes.

Choose True or False.

Anacondas are better off living on land.

- A) True
 B) False

Question Type: True False

Those heavy snakes are better off living in the water, where they swim very well. The water helps support their heavy body. The colour of the anaconda varies from dark green to olive green to yellowish green with dark spots or rings on it.

Anacondas like to lie in muddy water with just their eyes and nose sticking out. Like all snakes, they flick their tongue out to sniff the air. Their sense of smell seems to be better than their eyesight. Pits by the side of their mouth sense the heat of their prey too. They use their jaws and teeth to grab any animal that comes to get a drink, then coil around it with lightning speed, constricting or squeezing so tightly that the prey cannot breathe. Often, they just drown their prey since anacondas can hold their breath underwater for more than ten minutes.

Choose True or False.

Anacondas sniff the air by flicking their tongue.

- ✓ A) True
B) False

Question 33

Primary 3 English » Primary 3 English (Term 2)

1 pt

Read the passage below carefully.

Many people are confused about the world's largest snake. They are not sure if the python, boa constrictor, anaconda, cobra or viper is the largest. If you are talking about a heavy, long snake, then the anaconda is the biggest.

The boa constrictor grows up to 19 feet long. The anaconda, a member of the boa family, can grow to more than 30 feet long. That is as long as a bus! The python of Asia, about 30 feet long, weighs around 160 kilograms. A 30-foot long anaconda may weigh in at more than 250 kilograms! Anacondas are so heavy that they move slowly on land.

Those heavy snakes are better off living in the water, where they swim very well. The water helps support their heavy body. The colour of the anaconda varies from dark green to olive green to yellowish green with dark spots or rings on it.

Anacondas like to lie in muddy water with just their eyes and nose sticking out. Like all snakes, they flick their tongue out to sniff the air. Their sense of smell seems to be better than their eyesight. Pits by the side of their mouth sense the heat of their prey too. They use their jaws and teeth to grab any animal that comes to get a drink, then coil around it with lightning speed, constricting or squeezing so

tightly that the prey cannot breathe. Often, they just drown their prey since anacondas can hold their breath underwater for more than ten minutes.

Choose the correct answer.

These snakes can grow to more than 30 feet long and weigh more than 250 kilograms.

- ✓ A) Anacondas
B) Other snakes
