Test Questions **0 Test Assignments**

Question 1 Primary 5 Science » Primary 5 Science (Term 4) 2 pts

For each question, four options are given. One of them is the correct answer.

Refer to the flowchart below. A, B, C and D represent different living things.

Which of the following living things, A, B, C and D, do the mushroom and ^{fern} moss represent?

	Mushroom	Fern
(1)	B	C
(2)	A	D
(3)	D	A
(4)	C	B

- A) 1
- B) 2
- C) 3
- ✓ D) 4

Question 2

Primary 5 Science » Primary 5 Science (Term 4)

2 pts

The graph below shows the amount of food taken in by an organism daily at each stage of its life cycle. W, X, Y and Z represent different stages of its life cycle.

Based on the graph above, which of the following statement(s) is/are incorrect?

- A Stage Y is the pupal stage of the organism.
- B At stage Z, the organism reproduces by giving birth.
- C The organism remains in stage W and stage X for the same amount of time.
- D The organism goes through the same stages in its life cycle as the frog.

- A) A only
- B) A and D only
- C) B and C only
- ✓ D) B, D and C only

2 pts

Study the diagram of the fruit P below.

Based on the diagram, what can be concluded about fruit P?

- A Its flower is pollinated by wind.
- B It is produced from many flowers.
- C The ovary of its flower contains many ovules.
- D After fertilisation, the ovary of its flower swells and becomes the fleshy fruit.

- A) A and B only
- B) A and C only
- ✓ C) D and C only
- D) A , B and D only

2 pts

Study the diagram of the plant below. Part Q helps to store excess food for the plant.

Which of the following is another function of part Q?

- A) It holds the plant upright
- B) It photosynthesises to make food for the plant
- C) It takes in carbon dioxide and releases oxygen
- ✓ D) It helps the plant to take in water and minerals

Question 6

Primary 5 Science » Primary 5 Science (Term 4)

2 pts

Four students made comparisons about the human circulatory system and the plant transport system.

Student	Comparison statements	
	Human circulatory system	Plant transport system
Lara	Transports water, oxygen, carbon dioxide and digested food	Transports water, carbon dioxide and food
Ming	Transports food and water in separate blood vessels	Transports food and water in food and water-carrying tubes
Olivia	Transports substances absorbed in the blood	Transports substances through food and water-carrying tubes
Panya	Transports water to the upper and lower body parts of the human body	Transports water to the upper parts of the plant

Which students made the correct comparison statements?

- A) Laura and Ming only
- ✓ B) Olivia and Panya only
- C) Olivia, Lara and Ming only
- D) Olivia, Panya and Ming only

2 pts

Kya attended her swimming practice which lasted for 60 minutes. The graph below shows her heart rate during her practice.

Based on the graph, which of the following statements are correct conclusions?

- A) Kya's heart rate decreased the most after the 60th minute.
- B) Kya breathed in less oxygen after the 60th minute.
- C) Kya swam laps up and down the pool from the 15th to 60th minute without taking a break.
- D) At the heart rate of 120 beats per minute (bpm), Kya's heart only pumped blood rich in oxygen around her body.

- ✓ A) A and B only
- B) A and D only
- C) B, C and D only
- D) A, B and D only

2 pts

Surie wanted to find out how light affects gaseous exchange in the plants. She wrapped two identical-sized leaves from the same plant with different bags, A and B. The plant was placed under sunlight for four hours, as shown in the diagram below.

After four hours, which option shows the most possible change in amount of gases in each bag?

	Amount of oxygen in bag A	Amount of oxygen in bag B
(1)	remains the same	decrease
(2)	decrease	increase
(3)	decrease	remains the same
(4)	increase	remains the same

- A) 1
 ✓ B) 2
 C) 3
 D) 4

2 pts

Raina wanted to find out the magnetic properties of bars, W, X, Y and Z. They have the same masses. She hung some of the bars at position A while placing the others at B and observed the readings on the weighing scale.

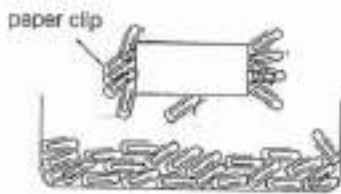

Position A	Position B	Reading on the weighing scale
W	X	decreases
Y	W	increases
Z	X	remains the same

Based on the results of the experiment, what can Raina observe after placing bar W in a container of steel paper clips?

A)

✓ B)

C)

D)

Question 17

Primary 5 Science » Primary 5 Science (Term 4)

2 pts

Logan wanted to investigate which material, A or B, is stronger. He carried out the experiment using the set-up as shown in the diagram below.

He added a load onto each set-up until the material broke. He repeated the experiment two more times and recorded the number of loads added to the material until it broke in the table shown below.

Set-ups	Number of loads added till the material breaks		
	First reading	Second reading	Third reading
Set-up 1	6	7	8
Set-up 2	7	8	8
Set-up 3	11	9	10
Set-up 4	7	6	8

Based on the results, which of the following statement is definitely true?

- A) Material B is as strong as Material A
- B) Logan should use all set ups to conduct a fair test
- C) Set-ups 3 and 4 allow Logan to conduct a fair test with reliable results
- ✓ D) Set-ups 1 and 4 allow Logan to conduct a fair test with reliable results

2 pts

Aina wanted to compare the properties of two objects, A and B. Aina placed object A into a measuring cylinder and poured 100cm³ of water into it. She noticed that the water level rose to the measurement of 150cm³. She repeated the same step for object B as shown in the diagram below.

Based on the experiment results, which is a possible conclusion Aina can make for both objects A and B?

- A) A has more mass than B
 B) B has more volume than A

- C) B has a volume of more than 150cm³
- D) Both A and B each has a volume of 50cm³

2 pts

An experiment was carried out in a dark room with four sheets of materials, P, Q, R and S, of the same size. A star-shaped hole of 5 cm in height was removed from the centre of P, as shown in the diagram below.

The four sheets of materials were arranged in a straight line. When the torch was switched on, only a bright patch of star-shaped light was seen on R.

Based on the results of the experiment, which of the following statements is/are true?

- A R does not allow light to pass through.
- B There will not be any shadow formed on the screen.
- C It is not possible to tell if S allows light to pass through.
- D P is transparent as it allows most light to pass through.

- ✓ A) A and C only
- B) B and C only
- C) B and D only
- D) A, C and D only

2 pts

Kim wanted to find out the electrical conductivity of four materials, M1, M2, M3 and M4. She stuck paper clips, A, B, C, D, E and F, on a cardboard. She placed the four materials on the cardboard and connected them to the paper clips with wires shown in the diagram below.

When Kim connected the ends of the circuit tester to the various paper clips shown in the diagram below, she obtained the following results.

Paper clips connected	Did the bulb light up?
C and E	No
A and F	Yes
D and B	Yes

Based on the results of the experiment, what can Kim observe and conclude?

	When connected to paper clips A and B, did the bulb light up?	Conductor of electricity	Insulator of electricity
(1)	No	M1	M2, M3, M4
(2)	No	M1, M2, M4	M3
(3)	Yes	M1, M2	M3, M4
(4)	Yes	M2, M3, M4	M1

- A) 1
- ✓ B) 2
- C) 3
- D) 4

Primary 5 Science » Primary 5 Science (Term 4)

0 pts

Rohan observed the fruits of another plant A. He made the following conclusion.

Fruits of plant	Dispersed by
A	Splitting

- (c) How would the seed dispersal method of plant A affect the thickness of the stems of its young plants?

Question Type: Essay

Date Added: Thu 9th Sep 2021

Last Modified: N/A

QID#: 28,962,772

Correctly answered feedback

Young plant A has a thinner stem. Fruits of plant A disperse by splitting action, so its seeds are scattered closer to one another and the parent plant. So young plant A need to compete for sunlight

Incorrectly answered feedback

Young plant A has a thinner stem. Fruits of plant A disperse by splitting action, so its seeds are scattered closer to one another and the parent plant. So young plant A need to compete for sunlight

0 pts

Joe took two similar leaves, J and K, from the same plant. Next, he removed air trapped in the leaves and immediately coated the leaf K with oil.

Leaf	Parts coated with oil
J	Not coated
K	Top and bottom surfaces

Joe punched 10 leaf discs each from leaf J and K and placed them in beakers, X and Y, filled with water and substance P. Substance P increases the amount of dissolved carbon dioxide in water. He placed each leaf's discs in a beaker and placed the beakers in a dark room as shown in the diagram below.

A few hours later, Joe moved the beakers to a brightly-lit room.

(a) Which beaker will Joe observe air bubbles? Explain your answer [2]

Question Type: Essay
Date Added: Thu 9th Sep 2021
Last Modified: N/A
QID#: 28,962,792

Correctly answered feedback

Beaker X. Leaf J does not have oil coated at the bottom of the leaves but both sides of Leaf K are coated with oil. During photosynthesis, the leaves take in carbon dioxide and give out oxygen. Which released from the stomata in leaf J, causing the leaf discs of J to produce bubbles

Incorrectly answered feedback

Beaker X. Leaf J does not have oil coated at the bottom of the leaves but both sides of Leaf K are coated with oil. During photosynthesis, the leaves take in carbon dioxide and give out oxygen. Which released from the stomata in leaf J, causing the leaf discs of J to produce bubbles
